## New OPUS Power Cords

### PEERLESS PERFORMANCE AND POWER

Transparent is pleased to announce that what we learned in the development of Generation 5 Audio Cables has led to a series of breakthroughs that unleash power cord performance. The 2 new OPUS Power Cords help your components deliver fuller, deeper tonal balance with more extension at either end of the musical spectrum and help your components deliver dynamics with a totally new level of musical realism.

The no-holds-barred, heftier OPUS Power Cord, \$5750, delivers quiet, unbridled power. The smaller, more flexible OPUS Power Cord Source, \$5550, elegantly helps less power-hungry components in tight spaces deliver ultimate performance.

#### NEW CABLE, CONNECTION, AND NETWORK TECHNOLOGIES

The OPUS Power Cord cable designs represent a new level of construction quality. Extremely tight, precision-wound, OFHC constructions and uniform, pressure-extruded insulation hold all elements firmly in place thereby preserving the intended electrical properties of these 2 new power cable designs.

During assembly, Transparent retains cable and conductor geometry at the terminal points. New connector designs also have tight-fitting contacts and vibration-damped, stiff carbon fiber housings. Transparent also custom-configures the connectors on each OPUS Power Cord to result in the cleanest, most strain-free connection possible.

A first for Transparent and for the audio industry, the networks on OPUS Power Cord and OPUS Power Cord Source are finely calibrated to the length of the cord for ideal, low noise, power transfer characteristics.

**OPUS POWER CORDS SHOULD BE  
YOUR NEXT UPGRADE CHOICE**

If you already own Transparent Power Cords, the Transparent Upgrade Program makes OPUS Power Cords more accessible by offering you a substantial trade-in value for your existing Transparent Power Cords.
