PowerBank 2IEC

The P2IEC is supplied with a High Performance PowerLink power cord

The PowerBank 2 offers the features that have made Transparent the leader in power products, in an amazingly compact enclosure: surge protection and noise suppression without any damage to delicate signals. The PowerBank 2 has 2 hospital grade outlets, and can be installed directly on a duplex wall outlet. Although it is diminutive in size, this capable PowerBank suppresses noise and grunge coming in from the power grid.

The PowerBank 2 features the security of surge protection without any of the performance drawbacks normally associated with surge protectors. Only Transparent gives you peace of mind without compromising in any way the music or picture that your system produces. After extensive research, Transparent developed an avalanche-diode design that gives the ultimate in protection; this is offered on all of our PowerBank and PowerIsolator products.

PowerBank 2 also has LED indicators to show power and filtering activity, and will indicate a line fault if the AC outlet is wired incorrectly.
