

TRANSPARENT AUDIO CONNECTED EQUIPMENT WARRANTY

During the warranty period applicable to a Transparent surge protection device (2 years from date of purchase extendable to 5 years upon registration) Transparent will pay to repair or, at its option, pay the fair market value of equipment damaged by an AC power surge or lightning surge on the AC power line, on the following terms and conditions:

The connected equipment must be used and connected to the Transparent surge protection device in accordance with the instructions and warranty provisions applicable to the connected equipment, including proper grounding.

The connected equipment must be connected in accordance with the instructions provided with the Transparent surge protection device.

This warranty is for the benefit of the original purchaser of the Transparent surge protection device for non-commercial use only and is non-transferable.

This warranty is secondary to any manufacturer's warranty on the connected equipment and/or any service contract or insurance maintained by the customer that covers the loss in whole or in part.

Transparent shall, in its sole discretion, determine from the condition of the surge protector and the damaged equipment that the damage was caused by a failure of the Transparent surge protector to properly function within its design specifications.

This warranty is in lieu of all other warranties, express or implied, including implied warranty of merchantability and fitness for a particular purpose.

This warranty does not cover consequential damages, including loss of computer data.

POWERBANK 2 INWALL WITH SURGE PROTECTION

Owner's Manual

Thank you for purchasing the Transparent PowerBank 2 InWall (we call it the P2IW for short). With this product you will find new enjoyment from your music and film systems. We certainly have!

The PowerBank 2 InWall is one of the finest surge protection power devices available. It features the security of surge protection without any of the performance drawbacks normally associated with surge protectors. Your new P2IW has two high current, grounded outlets. The P2IW can be used with stand-alone unprotected electronics or to add additional noise filtration and surge protection to an older Transparent power product.

Transparent power products effectively isolate components, remove line noise and modulation distortion, and suppress spikes and surges without the use of transformers, chokes or other series filtering devices which limit current capacity and add distortions. These unique products are the most transparent way to clean up the power going into your high end audio and video components for cleaner sound and picture coming out.

This LED indicates that your surge protection is active. (In normal circumstances this green LED is always on.)

If this red LED glows, it indicates that there is a problem with your line. You should immediately disconnect your equipment until you discover the source of the problem. (In normal circumstances this red LED is off.)

All Transparent products have a limited two year warranty on parts and labor. This warranty is extendable to five years to the original owner. To extend your warranty to five years, please fill out the enclosed warranty card and return to Transparent.

WARNING

The PowerBank 2 InWall must be used with the correct voltage to avoid damage to the unit and associated equipment. Please read the following instructions carefully before operating your P2IW.

INSTRUCTIONS AND NOTES

1 Be sure that the PowerBank 2 InWall has the correct voltage for your application. The voltage is marked on the label on the back of the P2IW. Use of the P2IW with the incorrect voltage can result in an unsafe condition and cause damage to the unit and your equipment. **Damage resulting from the use of the unit with improper voltage is not covered by the warranty.**

2 To be covered by the Connected Equipment Warranty, all system components must be plugged into a Transparent PowerBank, PowerWave or PowerIsolator (with surge protection), and any incoming source lines (such as CATV, satellite, antennas, phone, network, etc.) must also be protected by a Transparent Source Protector.

3 The PowerBank 2 InWall is designed to install into a 2 gang electrical device box (not included). The P2IW must be connected to a grounded 15 amp circuit to be covered by the Transparent Audio Connected Equipment Warranty (see back page). If the P2IW is installed in an ungrounded, or polarity reversed circuit, the red LED labeled **LINE FAULT** will illuminate. Use of the PowerBank 2 InWall under these conditions will void the Connected Equipment Warranty.

4 The green **PROTECTION ACTIVE** LED indicates that the surge protection circuitry is functioning properly. The LED will illuminate whenever the P2IW is connected to an active circuit. If the green LED does not illuminate, do not use the P2IW, and contact your Transparent dealer or Transparent Audio.

5 Both outlets on the PowerBank 2 InWall provide surge protection for your components. This circuitry does not add distortions or limit current to your components.
